

## Car Stops

The Car Stops parking curb is designed to effectively stop cars pulling into parking spots. It can also be used as effective curbing to create traffic circles, curb extensions etc. Molded bright reflective tape ensures visibility and pedestrian safety. Park-It is available in 3, 4 and 6' lengths and is installed with rebar spikes.

## Installation Guide

### **Installation of Park-it car stops with spikes (Recommended for asphalt surfaces):**

- Drill 1/2" diameter holes in the asphalt through the product's holes
- Drive 1/2" rebar spike (14" long) through the holes in the product

### **Installation of Park-it car stops with lag bolts and metal shields (Recommended for concrete surfaces):**

- Use 1/2" or 5/8 lag bolts (6" long)
- Drill 1/2" dia. pilot holes through the product's installation holes
- Remove the product, re-drill the holes for the diameter and depth required by the metal shields
- Install the metal shields, re-position the product and bolt with lag bolts
