

Speed Bumps

The Easy Rider speed bump reduces vehicle speeds to 2-5 mph. Molded bright reflective tape as well as high-quality cat's-eye reflectors alert drivers well in advance. Channeled bottom facilitates cables and drainage. Easy Rider is available in 4' and 6' lengths, along with end caps to protect the speed bump ends and motorists.

Installation Guide

Installation of Easy Rider speed bumps with spikes (Recommended for asphalt surfaces):

- Drill 1/2" diameter holes in the asphalt through the product's holes
- Drive 1/2" rebar spike (14" long) through the holes in the product

Installation of Easy Rider speed bumps with lag bolts and metal shields (Recommended for concrete surfaces):

- Use 1/2" or 5/8 lag bolts (5.5" long)
- Drill 1/2" dia. pilot holes through the product's installation holes
- Remove the product; re-drill the holes for the diameter and depth required by the metal shields
- Install the metal shields, re-position the product and bolt with lag bolts
